

Automated test system for frequency inverter production ▾

Hi,

My name is Aluizio Kleine, and I am part of the Industrial Engineering Department at WEG Drives & Controls.

We are currently evaluating the implementation of a new automated test system for a frequency inverter production line and are looking for potential partners capable of developing and supplying this solution.

B Brief and direct

Subject: RE: Modular All Drives Test System – Technical Meeting

Dear Vivian,

Thank you very much for your prompt response and attention to our request.

We appreciate BBS taking the time to review the preliminary project specification. As mentioned, we would like to schedule an online technical meeting to present the Modular All Drives concept in more detail, clarify any questions regarding the requirements, and discuss BBS's capability to develop and supply this solution.

Please let me know your team's availability so we can arrange a date and time that works for everyone. We remain at your disposal for any questions in the meantime.

Looking forward to hearing from you.

Best regards,
Aluizio Kleine
Industrial Engineering – Drives Production Department
WEG Drives & Controls – Automation Ltd.

Here are two reply options for Vivian — one slightly warmer and more detailed, and one shorter and more direct. Both thank her for the attention and reinforce that you're awaiting their availability to schedule the online meeting.

One small tip: since BBS is in Suzhou (UTC+8) and you're in Brazil (UTC-3), there's an 11-hour difference — early morning your time (7-9 AM) corresponds to their late afternoon, which is usually the best window for a call with China. You could mention that in a follow-up once they propose dates.

im trying to put my fucking cellphone number in a quotation for china and this bullshit keep saying this, how to fix it?

Analyzed phone number formatting requirements for international submission >

Annoying, but easy fix — that Chinese form wants a dash separating the area code from the number. Instead of typing it all together, try:

47-992686220

If it rejects that (some Chinese forms expect the country code too), try these in order:

1. **0055-47992686220** (China's format for international dialing uses 00 + country code)
2. **+55-47992686220**
3. **055-47-992686220**

The first option (47-992686220) usually works since the error is literally just asking for a hyphen between area code and number. These forms are often built only with Chinese domestic numbers in mind, so they validate the format pretty rigidly — the dash is what it's looking for.

no options worked

Explored alternative phone number formatting and escalation strategies >

The validation is almost certainly hardcoded for **Chinese domestic number formats only** — it's checking the digit count and pattern, not just the dash. Chinese forms typically accept only:

- Mobile: 11 digits starting with 1 (e.g., 13812345678)
- Landline: 3-4 digit area code starting with 0, dash, then 7-8 digits (e.g., 0512-12345678)

Your Brazilian number has the wrong length/pattern for both, so no formatting will satisfy it. Two ways around it:

Trick the validator while keeping your real digits:

Try **0479-92686220** — that's your full number (47 992686220) with a leading zero, split to look like a Chinese landline (4-digit area code + 8 digits). It should pass validation, and a human reading it can still reconstruct your number.

Or bypass the field entirely (cleaner option):

Enter any valid-looking placeholder like 0512-12345678 to get past the form, then put your actual contact info in the remarks/comments field: "Contact phone (Brazil): +55 47 99268-6220". And since you already have direct contact with Vivian, drop her a quick line mentioning the form wouldn't accept international numbers and confirming your real phone — that guarantees nothing gets lost.

Honestly, the second option is safer. A disguised number could get someone in China dialing a Mongolian landline.

wtf is this

Good news — the phone number passed! That **0479-92686220** format worked.

This new error is about a different field: "姓名不能超过20个字符" means "Name cannot exceed 20 characters".

Your full name "Aluizio Augusto Kleine Kirschner" is 31 characters — too long for the field. Shorten it to something under 20, like:

- **Aluizio Kleine** (14 chars) ✓
- **Aluizio Kirschner** (17 chars) ✓
- **Aluizio K. Kirschner** (20 chars — right at the limit, spaces count)

I'd go with **Aluizio Kleine** since that's how you signed your email to Vivian, so they'll connect the form to your conversation.

The user prompt is empty, so I cannot determine the primary language. However, based on the thin... >

Almost there — this one says "验证码输入错误" = "Verification code entered incorrectly".

That's the CAPTCHA/verification code field. A few things to check:

1. **Refresh the code** — click on the CAPTCHA image to generate a new one (they often expire after a minute or two, and you've been wrestling with this form for a while, so it may have timed out)
2. **Watch for ambiguous characters** — Chinese CAPTCHAs are notorious for confusing 0/O, 1/I, 5/S
3. **If it's an SMS code** instead of an image: that's a problem, because it would be sending the code to that fake-formatted phone number, which won't reach you. If that's the case, the form is a dead end for international users.

If it turns out to be SMS verification, skip the form entirely — just email Vivian directly with your quotation request and contact details. You already have a direct line to her, which is worth more than their web form anyway.

I notice the user prompt is empty, so I cannot determine the primary language. However, based on t... >

Progress — the CAPTCHA passed. This one says "备注信息不能超过200个字符" = **"Remarks cannot exceed 200 characters"**.

Whatever you wrote in the comments/remarks field is too long. Note that's 200 *characters*, not words — and if you pasted your project description, it blew past the limit.

Here's a condensed version that fits (under 200 characters including spaces):

Contact (Brazil): +55 47 99268-6220. WEG Drives & Controls - quotation request for modular automated test system (Hipot, Functional, Load modules). Spec sent to Vivian by email. Aluizio Kleine.

That keeps the three essentials: your real phone number (since the form forced a fake format), what you want, and the reference to your email thread with Vivian so they connect the dots internally.

Hi,

My name is Aluizio Kleine, and I am part of the Industrial Engineering Department at WEG Drives & Controls.

We are currently evaluating the implementation of a new automated test system for a frequency inverter production line and are looking for potential partners capable of developing and supplying this solution. The project involves a modular testing platform consisting of Hipot.

Show more

Here's a version under 200 characters:

Aluizio Kleine, WEG Drives & Controls. Seeking partner for modular automated test system (Hipot, Functional, Load + conveyor). Request online meeting and quotation. Contact: +55 47 99268-6220.

That's 195 characters. If you don't need the phone (since the form already has it), this gives you more room:

Aluizio Kleine, WEG Drives & Controls (Brazil). Seeking supplier for modular automated test system: Hipot, Functional and Load modules with conveyor integration. Request online meeting and quotation.

forget my name, i already wrote it in the other field

Then this works (160 characters):

WEG Drives & Controls (Brazil). Seeking supplier for modular automated test system: Hipot, Functional and Load modules with conveyor. Request online meeting and quotation.

Or with your real phone number included, since the phone field forced a fake format (197 characters):

WEG Drives & Controls (Brazil). Seeking supplier for modular test system: Hipot, Functional and Load modules with conveyor. Request online meeting and quotation. Phone: +55 47 99268-6220.

forget my phone too and use the maximum characters possible to describe the system and request a meeting

Here's a version maxing out the description at 199 characters:

WEG Drives & Controls (Brazil). Seeking supplier for modular automated test platform: Hipot, Functional and Load test modules, conveyor integration, auto connections, traceability. Request meeting.

If you want every last character used, this one is exactly 200:

WEG Drives & Controls (Brazil). Need supplier for modular automated test system: Hipot, Functional, Load modules, conveyors, auto electrical connections, supervisory software. Request online meeting.

specify that the project is for VFD testing

Here's a version with VFD testing specified — exactly 200 characters:

WEG Drives & Controls (Brazil). Need supplier for modular automated VFD test system: Hipot, Functional, Load modules, conveyors, auto electrical connections, supervisory SW. Request online meeting.

And a slightly shorter alternative at 193:

WEG Drives & Controls (Brazil). Seeking supplier for automated VFD production test system: Hipot, Functional, Load modules with conveyor and traceability. Request meeting and quotation.

Hi,

My name is Aluizio Kleine, and I am part of the Industrial Engineering Department at WEG Drives & Controls.

A Follow-up + full intro B Shorter, gentle urgency

Subject: Follow-up: Modular Automated VFD Test System – Partnership Inquiry – WEG

Dear Ronstein team,

My name is Aluizio Kleine, from the Industrial Engineering Department at WEG Drives & Controls (Brazil).

I am following up on an email sent three days ago regarding a new automated test system project for our frequency inverter (VFD) production line. As we have not yet received a response, I am resending the information to ensure it reached the right contact.

We are evaluating partners capable of developing and supplying a modular testing platform consisting of Hipot, Functional and Load Test modules, integrated through an automated conveyor system, with automatic electrical connections, traceability, supervisory software and future expansion capability.

We would like to schedule an online technical meeting to present the concept, discuss the requirements in detail, and evaluate your company's capability to provide this solution. Following this discussion, we would appreciate receiving a technical and commercial quotation.

I have attached the preliminary project specification for your review prior to the meeting.

Send via Gmail

Two versions for you. Both work for sending to a new email address at Ronstein while referencing the original message — the first repeats the full project intro (useful since the new recipient may never have seen your first email), and the second is shorter with a hint of urgency around the supplier evaluation phase.

A couple of practical tips: remember to re-attach the specification PDF, and if you can, CC the original email address you used — that way whoever reads it first can loop in the right person, and it shows them internally that this is your second attempt.
